SERVOMOTION · SIMULTANEOUS MULTI-LINE POSITIONING

SHUTTLE PRECISOR

Three-rail shuttle architecture: a single servo axis carries many laser carriages, one by one, to their recipe positions. Each carriage locks mechanically in place; once setup ends every cutting line stays visible at once.

±1.00 mm	**5–40+** carriages	**1** servo axis
PROJECTION ACCURACY	LASER CARRIAGES	MOVING AXIS

SYSTEM COMPONENTS

- Three-rail body: supply, carriage guide, servo shuttle
- One industrial line laser module per carriage
- Industrial PLC and single-axis servo drive
- Touch operator panel
- Spare carriages waiting in the reserve zone

TYPICAL APPLICATION

- Lines needing many simultaneous lines
- Production with frequent recipe changes
- Nonwoven, packaging and slitting applications
- Lines where line count is expected to grow
- Recipe exchange with line automation

TECHNICAL DATA

Final performance and connection scope are assessed together with motion load, working distance and mounting conditions. The lasers create an alignment reference; material and machine elements are set by the operator. Values may change without notice as the product develops.
