INSTALLATION NOTES

This page keeps the go-live steps and the technical and company details we need from you in one place. Ticked boxes mark the items already closed. Use the Excel list supplied in the package for day-to-day tracking, and kurulum-notlari.html for the tickable version.

0/7 UPLOAD STEPS	**15/17** OPEN DETAILS
5/7 HIGH PRIORITY	**5** CATEGORIES

FILE STRUCTURE

Every file in the package unpacks into the same root. The relative positions of the `assets/`, `og/`, `video/` and `en/` folders must stay as they are.

```
index.html                 core-precisor.html        shuttle-precisor.html
uygulama-lastik.html       uygulama-nonwoven.html    uygulama-ambalaj.html
referanslar.html           servis.html               dokumanlar.html
sss.html                   sozluk.html               kurumsal.html
iletisim.html              kvkk.html                 404.html
rehber.html + 11 × rehber-*.html

en/                        → English version (9 pages · glossary and faq included)
assets/                    → base.css · rehber.css · brandfont.css · core-precisor.jpg
fonts/                     → poppins-Regular.woff2 · poppins-Bold.woff2 (wordmark)
foto/                      → site photograph placeholders (replace under the same names)
og/                        → 15 sharing images (1200×630)
video/                     → Shuttle scenario video and poster image
favicon.svg   sitemap.xml   robots.txt   .htaccess
servomotion-core-precisor-veri-sayfasi.pdf     · TR
servomotion-shuttle-precisor-veri-sayfasi.pdf  · TR
servomotion-core-precisor-datasheet.pdf        · EN
servomotion-shuttle-precisor-datasheet.pdf     · EN
servomotion-tuv-uygunluk-sertifikasi.pdf       · TÜV Rheinland certificate
```

BEFORE YOU UPLOAD

Seven steps. Five are technical, two need a decision.

- [ ] STEP 1

Domain check

sitemap.xml, robots.txt and the `canonical` / `og:url` tags on every page are written against `https://www.servomotion.com.tr/`. The package includes a ready `.htaccess`: https is enforced, the address without www redirects to www, and the former `blog-*.html` addresses move to `rehber-*.html`.

OWNER · WEB ADMINISTRATOR

- [ ] STEP 2

404 page and server rules

Copy the `.htaccess` file from the package into the site root as well; it carries the 404 page, the redirects, compression and the cache settings. If your server runs Nginx, define the Nginx equivalent of the same rules.

OWNER · WEB ADMINISTRATOR

- [ ] STEP 3

Former blog files (renamed as guides)

Delete any `blog*.html` files already uploaded to the server under the previous naming; the articles now arrive as `rehber-*.html`.

OWNER · WEB ADMINISTRATOR

- [ ] STEP 4

Where the PDF files belong

Keep the datasheet PDFs in the same folder as the HTML files; `dokumanlar.html` links to them from there.

OWNER · WEB ADMINISTRATOR

- [ ] STEP 5

Form endpoint OPTIONAL

Enter the address of a form service in the `window.SERVOMOTION_FORM_ENDPOINT` field inside `iletisim.html` and the “SEND BY EMAIL” button becomes “SEND”, so the summary reaches you directly. Left empty, the current email / WhatsApp flow carries on working. If you connect it, update the sentence in the KVKK privacy notice stating that no form sends data to a server.

OWNER · WEB ADMINISTRATOR + LEGAL

STEP 6

Fonts

The pages pull the Barlow, Barlow Condensed and IBM Plex Mono fonts from Google Fonts. For privacy and speed it is cleaner to host these files on your own server and serve them from `assets/`; in that case update the font declaration in `assets/base.css` and remove the font service paragraph from the KVKK privacy notice.

OWNER · WEB ADMINISTRATOR

STEP 7

Tell the search engine

Once the site is live, submit the `sitemap.xml` address to Google Search Console.

OWNER · MARKETING

UPLOADING TO A SERVER THAT ALREADY RUNS WORDPRESS

This site is plain HTML; it needs no WordPress, PHP or database. If WordPress sits at the root of the domain, however, two `index` files end up side by side and WordPress carries on serving the home page. Choose one of three routes:

```
1  Move to the static site  → the WordPress files are backed up and removed from the root,
                            and the package is unpacked into public_html. The quickest and safest
                            option; no plugin, update or database load is left behind.

2  Trial in a subfolder     → the package is unpacked into a folder such as /yeni/,
                            checked at www.servomotion.com.tr/yeni/,
                            then moved to the root.

3  Stay on WordPress        → the pages have to be rebuilt in Elementor.
                            The configurator and the simulation run only when embedded
                            in a “custom HTML” component; this is the hardest to maintain.
```

We recommend route 1 or 2. Upload over FTP/SFTP or with the file manager in your hosting panel; unpacking the zip on the server is the most practical. Set folder permissions to 755 and file permissions to 644.

CONNECTING THE FORM ENDPOINT

This line sits at the end of `iletisim.html`:

```
window.SERVOMOTION_FORM_ENDPOINT = "";
```

Enter the address of a form service between the quotation marks (your own PHP script or a form service) and the “application summary” tool on the page posts straight to the server. Left empty, the summary opens as a prepared email or WhatsApp message — so the site works in full while this field is empty.

DETAILS WE NEED FROM YOU

The items below are technical and company details that cannot be invented, which is why the pages leave them as "depends on the configuration". They go into the relevant pages once they are ready.

	CATEGORY	ITEM AND WHERE IT GOES	FROM	PRIORITY	STATUS AND NOTE
☑	TECHNICAL	**Laser class and wavelength** Product pages → Technical Specifications · datasheet PDFs	Technical team	HIGH	COMPLETE IEC 60825-1 · Class 2M/3R
☑	TECHNICAL	**Housing protection rating (IP)** Product pages → Mechanics & Motion	Technical team	HIGH	COMPLETE IP54
☑	TECHNICAL	**Operating temperature and humidity range** Product pages → Control & Communication	Technical team	MEDIUM	COMPLETE +10 … +40 °C
☑	TECHNICAL	**Supply and power consumption** Product pages → Control & Communication	Technical team	MEDIUM	COMPLETE 220 V AC 50 Hz
☑	TECHNICAL	**System weight** Product pages → Mechanics & Motion	Technical team	MEDIUM	COMPLETE Depends on the application
☑	TECHNICAL	**Mounting interface** Product pages → Mechanics & Motion	Technical team	MEDIUM	COMPLETE Depends on the application
☑	TECHNICAL	**CE / declaration of conformity** dokumanlar.html · TR and EN product pages	Mahmut	HIGH	COMPLETE TÜV Rheinland · AK 50498967 0001
☐	COMPANY	**Site photographs** foto/ folder · replace under the same file names	Mahmut	HIGH	IN PROGRESS Placeholders opened, images awaited
☑	COMPANY	**Consent to name reference customers** referanslar.html	Mahmut	LOW	COMPLETE Staying anonymous
☑	COMPANY	**Logo** Menu on every page	Mahmut	HIGH	COMPLETE Poppins wordmark
☑	COMPANY	**Team visibility** kurumsal.html	Mahmut	LOW	NOT REQUIRED —
☑	LEGAL	**KVKK privacy notice** kvkk.html	Legal adviser	HIGH	COMPLETE Existing text retained
☑	CONTENT	**Guide publication dates** rehber.html + 11 articles	Mahmut	MEDIUM	COMPLETE 16.09.2026
☐	CONTENT	**Log slicing (timber) case study** referanslar.html	Mahmut	HIGH	IN PROGRESS Card added (Core Precisor K3) · travel figure awaited
☑	ENGLISH	**EN datasheet PDFs** en/ product pages	Claude	MEDIUM	COMPLETE datasheet.pdf
☑	ENGLISH	**EN glossary and FAQ** en/glossary.html · en/faq.html	Claude	LOW	COMPLETE 24 terms · 18 questions
☑	ENGLISH	**Translation of the interactive tools** en/ product pages	Claude	LOW	COMPLETE Core simulation + Shuttle configurator

Use the Excel version of the same list for lasting tracking.
